

2. **Amendments to the Claims:**

Please cancel Claims 1-51 and 56.

10 52. (Original) A system for locating a user of a wireless communications system
11 wherein the wireless communications system has a central computer connected to one or more
12 access points which communicate wirelessly with a badge associated with a user, the system
13 comprising:

14 means for determining the current access point being used for communications by the
15 badge of the user being located; and

16 means for generating a location indicator for the user wherein the location indicator is the
17 name and location of the access point currently being used by the user.

1 53. (Original) A method for locating a user of a wireless communications system
2 wherein the wireless communications system has a central computer connected to one or more
3 access points which communicate wirelessly with a badge associated with a user , the method
4 comprising:

5 receiving a request to locate a user of the wireless communications system;

6 determining the access point currently being used for communications by the badge of
7 the user; and

8 generating a location indicator for the user wherein the location indicator is the name and
9 location of the access point being used by the user.

1 54. (Original) A system for locating a member of a group of a wireless
2 communications system wherein the wireless communications system has a central computer
3 connected to one or more access points which communicate wirelessly with one or more badges
4 associated with one or more members of the group, the system comprising:

5 means for determining the current access point(s) being used for communications by the
6 badge(s) of the one or more members of the group specified by a group location request; and

7 means for generating a location indicator for the member in the group wherein the
8 location indicator is the name and location of the access point currently being used by the
9 member of the particular group.

55. (Original) A method for locating a member of a group of a wireless communications system wherein the wireless communications system has a central computer connected to one or more access points which communicate wirelessly with one or more badges associated with one or more members of the group , the method comprising:

receiving a request to locate a member of a group of the wireless communications system;

determining the current access point(s) being used for communications by the badge(s) of the one or more members of the group specified by a group location request;

generating a location indicator for the members in the group wherein the location indicator is the name and location of the access point currently being used by the members of the group.
